

Damon[®] System

We are able to offer our patients the option of using passive self-ligating Damon System braces. Damon braces use a slide mechanism to hold the archwire, reducing the amount of pressure exerted on the teeth and allowing the teeth to move freely, quickly, and comfortably.

Tie-less braces -- A world without elastic ties

The Damon System facilitates healthy tooth movement with complete control. By combining tie-less brackets and high-tech archwires, we can minimize discomfort and create beautiful smiles that last a lifetime.

Technology

Damon tie-less braces eliminate the need for elastic or metal "ties." This means you cannot have colours on your braces!

Comfort

Damon braces have a reputation for being comfortable.

Convenience

Damon braces are designed to be discreet, comfortable, and easy to keep clean. The Damon System is available in clear brackets (upper only) for patients who want a great smile without sacrificing aesthetics.

Treatment Time

While the time needed in braces will vary from case to case, treatment time with the Damon System is generally similar to those with conventional braces.
